What is OZ in Office?

OZ in Office is a form builder to convert Microsoft Office documents to an e-document with input capabilities. By using OZ in Office, one can easily convert business forms (Contract, application form, approval request, etc.) made with Excel, Word and PowerPoint. Converted forms can be used through a dedicated viewer not only in PC but also in mobile and can be used anytime and anywhere regardless of time and place.

■ OZ in Office Features

Before, companies had to use separate document development tools to develop Excel, Word, PowerPoint documents into form-based documents. However, with OZ in Office, anyone who is eligible to use Microsoft Office can create and develop form easily.

Features of OZ in Office are

- It is an add-in of Excel, Word and PowerPoint which is easy to install.
- Provide various input components (Signature, CheckBox, TextBox, Camera, VoiceRecorder, etc.)
- Completed form can be checked promptly by using preview functions and uploaded.

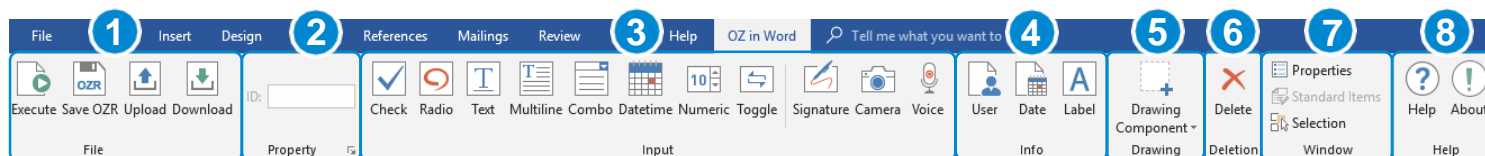

Now, you can easily create form using OZ in Office.

What is OZ in Office?

Learn about OZ in Office

OZ in Office is installed as an add-in of Excel, Word, PowerPoint after the installation of OZ in Office, The ribbon menu gets added on each program.

① File

With the written document, OZ in Office executes eformsign then converts, uploads, or downloads in e-document or saves in the report file.

② Property

Set properties of input components.

③ Input

Add the input components to the form.

④ Info

Add user/date information so the user/date information would automatically displayed on the form.

⑤ Drawing

Add components of Input/Document Info group in desired location and size.

(Only available in OZ in Word/OZ in PowerPoint.)

⑥ Deletion

Delete the OZ in Office input component.

⑦ Window

Set some attributes of the input component as external files. Also, it is possible to select the input component. (Only available in OZ in Word/OZ in PowerPoint.)

⑧ Help

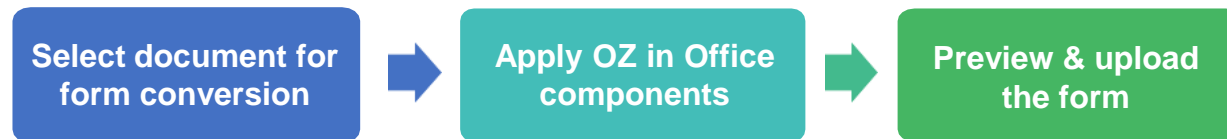

Check and update version.

What is OZ in Office?

Creating form using OZ in Office

OZ in Office is an e-document builder to convert Excel, Word, PowerPoint documents into a form. It enables OZ in Office input components to operate. The making process is described below.

- Select document for form conversion
- Apply OZ in Office components.
- Preview & upload the completed form.

Before using OZ in Office

Add & Delete OZ in Office component

By using OZ in Office ribbon menu, it is able to add input components.

Methods of adding/deleting input components are described below.

① Add component

- **OZ in Excel**

- ✓ Select the cell which to apply input component and click icon in the Input/Document Info group.

- **OZ in Word/OZ in PowerPoint**

- ✓ Select the location which to apply input component and click icon in the Input/Document Info group from ribbon menu.
- ✓ Select the component from dropdown menu which is displayed by clicking **Drawing Component** icon in Drawing group.

② Delete component

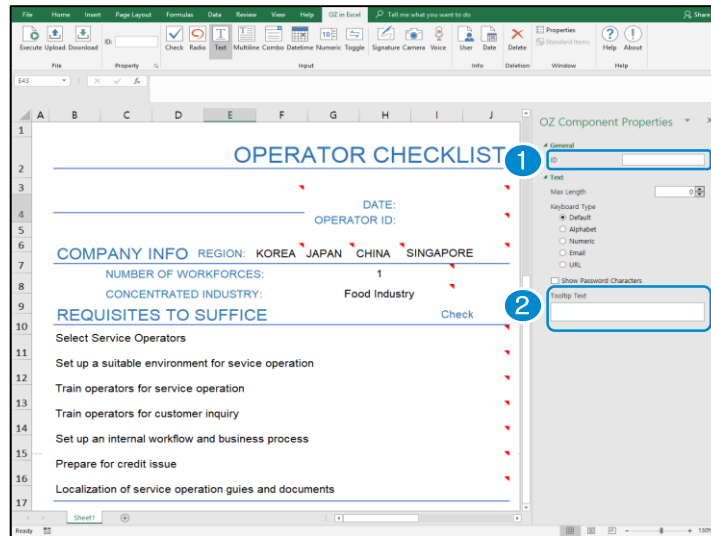

Regardless of the component (cell, shape, textbox, etc.), the user may delete the component by clicking **Deletion** icon in Deletion group.

Before using OZ in Office

Properties

Every OZ in Office input components share common properties and have its own properties. Each can be checked via **OZ Component Properties** window. There are **ID** and **Tooltip Text** for the common properties and each properties' meanings are shown below.

① ID

ID is an unique key that is used to extract input value.

② Tooltip Text

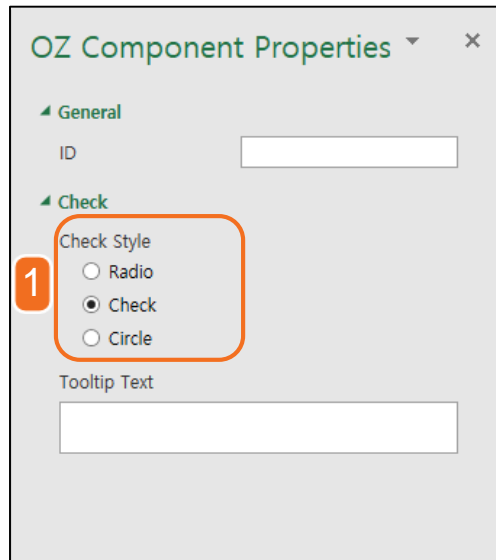

- Windows Environment: Tooltip Text pops up as a text balloon when the cursor hovers over input components.
- Mobile Environment: When the input components are shown in dialog boxes, Tooltip boxes show up as the title.

NOTE

- OZ Component Properties window gets displayed by selecting input component applied location then clicking property icon (🔧) in property group of OZ in Office or by clicking OZ Component Properties on popup menu.

1 Using check style property, ways of selecting items can be set.

♦ Radio

RadioButton and its contents are displayed.

| | | | | |
|--------------------------------|---|-------------------------------------|--------------------------------|----------------------------|
| <input type="radio"/> Personal | <input type="radio"/> Medical Treatment | <input type="radio"/> Family Affair | <input type="radio"/> Vacation | <input type="radio"/> ETC. |
|--------------------------------|---|-------------------------------------|--------------------------------|----------------------------|

♦ Check

CheckBox and its contents are displayed.

| | | | | |
|--|--|---|-----------------------------------|-------------------------------|
| <input checked="" type="checkbox"/> Personal | <input type="checkbox"/> Medical Treatment | <input checked="" type="checkbox"/> Family Affair | <input type="checkbox"/> Vacation | <input type="checkbox"/> ETC. |
|--|--|---|-----------------------------------|-------------------------------|

♦ Circle

Only that particular content is displayed and gets displayed in red when selected.

| | | | | |
|-----------------|-------------------|---------------|----------|------|
| Personal | Medical Treatment | Family Affair | Vacation | ETC. |
|-----------------|-------------------|---------------|----------|------|

OZ Component Properties – Radio

1 Using the property ID, the selectable items can be grouped.

2 Set ways of selecting items using selecting style property.

♦ Radio

RadioButton and its contents are displayed.

| | | | | |
|---|---------------------------------------|--------------------------------------|-------------------------------------|------|
| <input checked="" type="radio"/> Annual Leave | <input type="radio"/> Family Occasion | <input type="radio"/> Official Leave | <input type="radio"/> Special Leave | ETC. |
|---|---------------------------------------|--------------------------------------|-------------------------------------|------|

♦ Check

CheckBox and its contents are displayed.

| | | | | |
|---------------------------------------|--|---|--|------|
| <input type="checkbox"/> Annual Leave | <input type="checkbox"/> Family Occasion | <input type="checkbox"/> Official Leave | <input type="checkbox"/> Special Leave | ETC. |
|---------------------------------------|--|---|--|------|

♦ Circle

Only that particular content is displayed and gets displayed in red when selected.

| | | | | |
|--------------|-----------------|----------------|---------------|------|
| Annual Leave | Family Occasion | Official Leave | Special Leave | ETC. |
|--------------|-----------------|----------------|---------------|------|

NOTE

- Radio component is also used when selecting different gender, positions, and etc.. However, property ID must be different from each group to the other in order to let user to select one item from each box.

OZ Component Properties – Radio

Date Type

☐ Date created

☒ Date accessed

☐ Last modified date of the content

1 Configures the document's type and date format using OZ Component Properties of User/Date.

♦ **Format(Only available in OZ in Word/OZ in PowerPoint)**

Configures the date format.

♦ **Document Creator / Date created**

Displays the creator and converted date of the form.

♦ **Current User / Date accessed**

Displays the person who accessed the document or the converted form accessed date.

♦ **Last modified user of the content / Last modified date of the content**

Displays the person who edited the document or the modified date. If this option is enabled, it gets displayed on the input component ID text box below the dialog window and it automatically shows the document information(the person who last modified or the date last modified) of that particular ID.

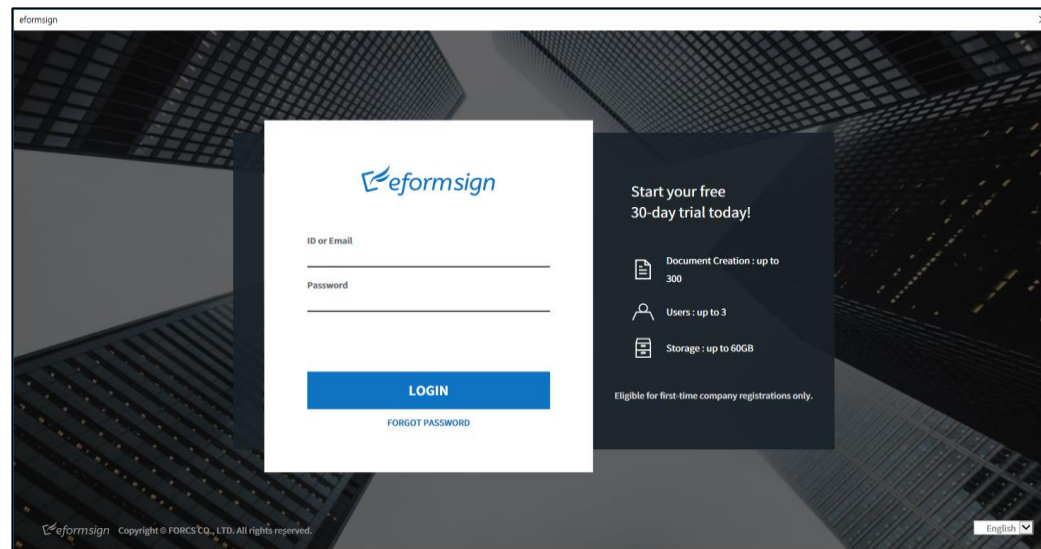

Preview & Upload form

Log in & Preview form

Preview can let the user to pre-view the document applied with OZ in Office and check if the insertable components are working properly.

When **Execute** icon is clicked, the login page of eformsign service will popup. Once logged in, the converted form will show up.

Preview & Upload form

Upload created form

Upload the form applied with OZ in Office components.

The screenshot shows the OZ in Office application interface. A blue header bar at the top contains the text 'checklist(ENG)' and a 'FORM FILE UPLOAD' button. Below the header, the form content is displayed. It includes a section titled 'OPERATOR CHECKLIST' with a date field set to '2018-11-14' and an operator ID field. The 'COMPANY INFO' section includes radio buttons for 'REGION' (KOREA, JAPAN, CHINA, SINGAPORE) and a 'NUMBER OF WORKFORCES' field set to '1'. The 'REQUISITES TO SUFFICE' section is a table with a 'Check' column and several rows of tasks, each with a checkbox. The 'Service Operator's Manager' section is at the bottom with two empty input fields.

① Execute

After selecting the proper server, the user may log in to the service with ID and password. The user can preview the created form after login.

Preview & Upload form

② Upload

The user may upload the created form as a new template by clicking **FORM FILE UPLOAD** on the preview screen or by clicking **Upload** icon on the ribbon menu.

Name, description and category of the form can be set in the Create a Template menu.

Standard Items

Standard Items Component

Apply an external file to the e-document that defines the input components and properties you use repeatedly.

Setting Standard Items

Set the file path of standard_items.xml in ozconfig.xml as below in order to apply the standard items.

```
<?xml version="1.0" encoding="utf-8"?>
<serviceInfo>
...
  <standardItems>
    <url>http://127.0.0.1:8080/userservice/standard_items.xml</url>
  </standardItems>
...
</serviceInfo>
```

Save the path's standard_items.xml as below.

```
<?xml version="1.0" encoding="utf-8"?>
<standardItems>
  <categories>
    <category displayName="Patient">
      <item id="PT_ID" displayName="patient ID" type="textBox">
      <item id="PT_KJ_NAME" displayName="patient name" type="textBox">
      <item id="NYUIN_DATE" displayName="hospitalization day" type="dateTimePicker">
      <item id="NYUOUT_DATE" displayName="discharge day" type="dateTimePicker">
      <item id="NOK" displayName="guardian">
      <item id="CONFIRMER" displayName="guardian" type="docUserInfo" />
      <item id="TREATMENT_PLANNING1" displayName="medicine treatment" type="checkBox"/>
      <item id="TREATMENT_PLANNING2" displayName="psychotherapy(counselling, rest)" type="checkBox"/>
      <item id="TREATMENT_PLANNING3" displayName="physiatrics occupational therapy" type="checkBox"/>
      <item id="TREATMENT_PLANNING4" displayName="etc" type="checkBox"/>
    </category>
  </categories>
</standardItems>
```

① item id

The name of input component.

② displayName

This is the name of the item displayed in the standard items window.

③ type

Set the type of input components.
Input components are as following table.

Standard Items

Standard Items Input Components

Available input components on Standard items are as below.

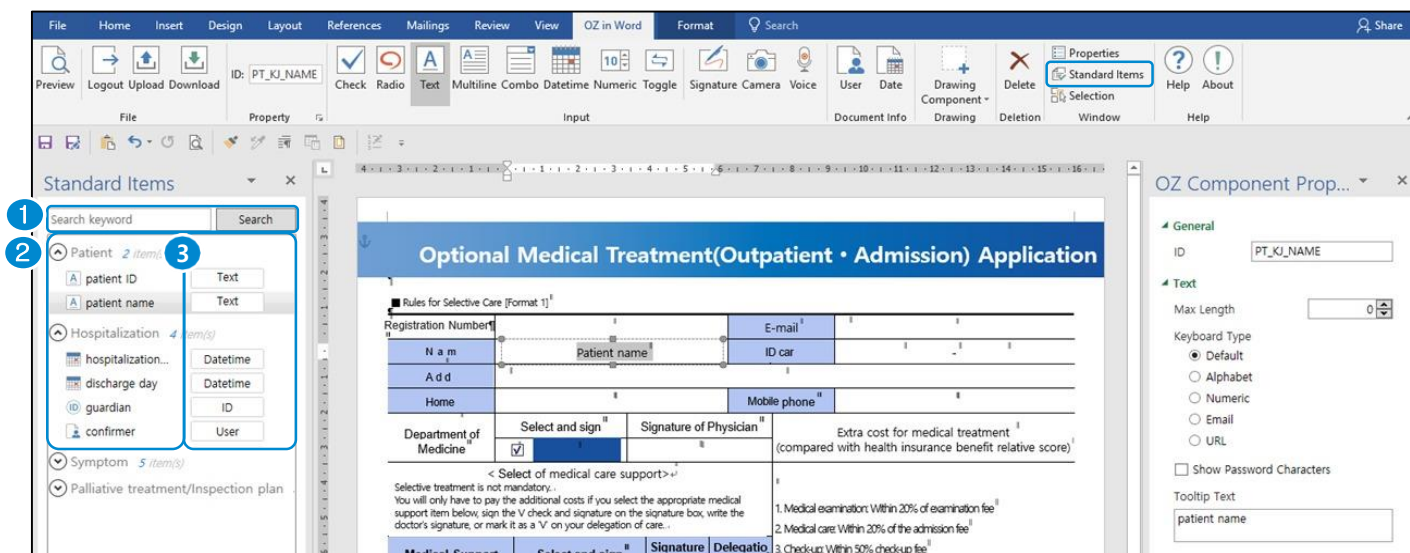

| Type | Input component | Type | Input component | Type | Input component | Type | Input component |
|-----------------|-----------------|-----------------------|-----------------|----------------------|-----------------|--|-----------------|
| checkBox | Check | radioButton | Radio | textBox | Text | multiLineTextBox | Multiline |
| comboBox | Combo | dateTimePicker | Datetime | numericUpDown | Numeric | toggleButton | Toggle |
| signPad | Signature | camera | Camera | voiceRecorder | Voice | docUserInfo docDateInfo | User Date |

Standard Items

Setting standard items in OZ in Office

If you login to repository server and standard_items.xml file exists in the repository, the **Standard Items** icon is activated.

① Search

Search by standard items name.

② Standard items name

A list of standard items that can be set is displayed.

③ Standard items type button

When you click the standard items type button, the standard items is added to the e-document. If the item is already input, the name and type of it change.

Applying EXCEL formula

Basic Operation

EXCEL operations which can be used with OZ in EXCEL input components are shown below.

However, Multiline, Signature, Camera, Voice components are not supported.

| Operator | Operation Description | Remark |
|----------|------------------------------|-----------------------------------|
| + | Addition | |
| - | Subtraction | |
| / | Division | |
| * | Multiplication | |
| () | Prioritize | |
| +, / | Sign | |
| : | Cell address range operation | Only valid for function arguments |
| , | Cell address union operation | Only valid for function arguments |
| ! | Refers to other sheets | Only valid for function arguments |

Applying EXCEL formula

Function

EXCEL functions that can be used with OZ in EXCEL input components are shown below. However, Multiline, Signature, Camera, Voice components are not supported.

Also, functions other than if should set at least one input component. In this case, applicable components are Text, Combo, Datetime, Numeric, Toggle, User, and Date.

| Function | Remarks |
|----------|---|
| IF | IF(condition, value_if_true, value_if_false) forms are supported. Only , <>, >, >=, <, <= comparison operators are supported. |
| SUM | |
| LEFT | |
| MID | |
| RIGHT | |

Applying EXCEL formula

| Function | Remarks |
|----------|--|
| MATCH | <ul style="list-style-type: none">• Search method and return value convention based on match_type.<ul style="list-style-type: none">✓ match_type = 1 or omitted Searches until a value greater than lookup_value is found, returns the value's position when finds the equivalent value, returns the previous value's position when finds the greater value. Returns #N/A if the first value is greater than lookup_value and returns the last value's position if there is no greater value than lookup_value.✓ match_type = 0 Same as Microsoft Excel operating rule.✓ match_type = -1 Searches until a value smaller than lookup_value is found, returns the value's position when finds the equivalent value, returns the previous value's address when finds the smaller value. Returns #N/A if the first value is smaller than lookup_value and returns the last value's position if there is no smaller value than lookup_value. |

Applying EXCEL formula

| Function | Remarks |
|----------|--|
| VLOOKUP | <ul style="list-style-type: none">• Search method and return value convention based on range_lookup.<ul style="list-style-type: none">✓ range_lookup = 1 or omitted Searches the same as when the third argument (match_type) of the MATCH function is 1. However, returns a value, not a position.✓ range_lookup = 0 Same as Microsoft Excel operating rule. |
| HLOOKUP | <ul style="list-style-type: none">• Search method and return value convention based on range_lookup.<ul style="list-style-type: none">✓ range_lookup = 1 or omitted Searches the same as when the third argument (match_type) of the MATCH function is 1. However, returns a value, not a position.✓ range_lookup = 0 Same as Microsoft Excel operating rule. |

Additional Info

User Environment

| Item | Requirements |
|---------|--|
| System | Windows Vista Service Pack 2 or higher |
| OS | Any environment supporting Microsoft Office 2010 or higher |
| CPU | Over 500 MHz |
| HDD | Free storage space of 2 GB or more |
| Memory | 256 MB or higher |
| Monitor | Resolution of 1024 * 768 or higher |
